

# Bookshelf and bass, no longer mutually exclusive.

## H-PAS™ bass technology throws out the old rules.

H-PAS stands for Hybrid Pressure Acceleration System. It's a completely new—and better—way to generate bass. By cascading several bass technologies onto each other, our patent-pending H-PAS system breaks the Iron Law of loudspeaker acoustics: for the first time, you can have deep bass, a compact cabinet and outstanding efficiency all together.

With just a single 5 1/4" woofer and our smooth 1 1/8" Low Resonance Tweeter, the AT-2 reaches down to a potent 41 Hz (-3dB), without any on-board electronics or equalization of any kind. When you hear it, you might be amazed that such deep bass is coming from a speaker less than 16" tall.

Combine that with a sophisticated, refined crossover, a top-quality hand-rubbed finish, and our customary fanatical attention to detail, and you have a speaker that you have to see and hear to believe.

Contact Atlantic Technology today, and we'll tell you how to do just that.

Hybrid Pressure Acceleration System

"Deep and powerful, taut  
and tuneful. Bravo H-PAS!"

ERICK LICHT,  
*Stereophile Magazine*

"Does H-PAS work? Indeed  
it *does* work. Rather  
incredibly well, in fact."

DOUG BLACKBURN,  
*Widescreen Review Magazine*
