Solution Series

URC's Solution Series solves many problems. The newest model, the MXW-920, is Splashproof and Weather Resistant, making it the perfect choice for outdoors and kitchens

KP-4000

In-Wall solution, compatible with Network Series product

MXW-920

Splash-proof, weather resistant option for outdoors or kitchens.

MX-880Z

2.4GHz RF solution for MDUs and trouble RF locations.

Must be paired with MRZ-260 Base Station

KP-900

On-Wall solution, perfect for secondary zones. No Holes installation!

The MX-780 is the LEAST expensive PC-programmable remote in the URC lineup

Don't forget a compatible RF base station for "no rules" operation through walls and floors!

The MX-5000 is sleek, elegant and can communicate two-way with URC's PSX-2 iDock!

Screen

Although the two basic varieties are COLOR and B&W, some screens can also be TOUCH SCREENS. Some remotes are limited by the amount of characters that can be placed on a button, while advanced graphic controllers can alter the text size and button size to allow this number to grow.

(All screen sizes are measured diagonally)

Transmission Protocol

This category shows the different communication method for each controller. The different choices are :

IR: Infra-red (line of sight)

RF: Radio frequency (may be 418MHz, 433MHz or 2.4GHz)

Network: LAN communication, either Wi-Fi or IP

Memory

Every controller has a limit of the maximum number of DEVICES, COMMANDS and MACROS. Although even the most basic is probably enough for most jobs, more complex programming may require a higher capacity.

Programming Method

Hand programmed units do not require an internet connection, but have programming/archiving limitations while PC Programmed units are more versatile but DO require a computer!

Power

While some remotes need replaceable batteries, other have rechargeable batteries. A charging base is a step-up feature and replaces the cord to the remote.

Programming Logic

Variables allow the controller to track specified "states", based upon the programming

Conditional Logic uses IF/ELSE statements to evaluate variables and dictate actions based on the result.

Timers allow macros to be programmed to execute at specified times.

Press and Hold permits the programmer to create two actions for a button that will execute based upon the duration of the button press.

Convenience & Customization

Themes allow for different colors/pictures on various remote pages (may be supplied or custom)

Favorites allow for page(s) of channels w/icons

Pick-Up Sensor: The remote will turn-on when lifted from a prone position.

Four-Colored Keys: The remote has 4 hard-buttons (red, green, blue & yellow) to replicate those found on cable remotes.

Time or Date On-screen: Optionally display time, or date, on any/all user screens.
